Project Report

On

DarshanEase

Developed as part of the LNCT Group Placement Initiative for the SkillWallet SmartBridge Program.

Developed By:

Radha Yadav(0131CS231151) – CSE

Bhumika Rajput (0131CS231063) – CSE

Sittu Kumar Singh (0131CS231194) – CSE

Shravan Kumar Ray (0103EC231193) – EC

Under the Guidance of

SmartBridge Experiential Learning Program

LNCT Group of Colleges, Bhopal

Approved by AICTE New Delhi & Govt. of M.P.

Affiliated to Rajiv Gandhi Proudyogiki Vishwavidyalaya, Bhopal (M.P.)

Year - 2026

CERTIFICATE

This is to certify that the project titled "DARSHAN EASE – Temple Visit Management and Booking System" has been successfully completed by

Radha Yadav

Bhumika Rajput

Sittu Kumar Singh

Shravan Kumar Ray

as a part of the Skill Wallet – SmartBridge Program under the Placement Initiative of LNCT Group of Colleges, Bhopal.

This project work is submitted as a part of practical learning and project development in the field of Computer Science and Engineering. The project has been carried out under proper guidance and supervision and demonstrates the practical implementation of modern web technologies including frontend, backend, and database integration.

DECLARATION

We hereby declare that the project titled "**DARSHAN EASE** – Temple Visit Management and Booking System" is an original work carried out by me as part of the Skill Wallet – SmartBridge Program under the placement initiative of **LNCT Group of Colleges, Bhopal.**

This project has been developed with the objective of applying practical knowledge of Web Development, Database Management, and System Design. The work presented in this documentation is entirely based on our own efforts and has not been submitted previously for any other certification or academic award.

All the resources, references, and tools used in this project have been properly acknowledged.

We take full responsibility for authenticity and originality of this work.

ACKNOWLEDGMENT

We would like to express our sincere gratitude to the **LNCT Group of Colleges** and the SmartBridge Program Team for providing us with the opportunity to work on the project titled **"Darshan Ease".** This project has been a great learning experience and has helped us enhance our technical knowledge and practical skills.

We would like to thank our mentors and coordinators for their valuable guidance, continuous support, and encouragement throughout the development of this project.

We are also grateful to all our team members for their cooperation, dedication, and teamwork in successfully completing various components of the project including frontend development, backend development, database configuration, and integration.

Finally, we would like to thank everyone who directly or indirectly supported us in completing this project successfully.

Project Team

1. Project Title

DarshanEase – Online Temple Darshan Management System

2. Abstract

DarshanEase is a web-based application developed to simplify temple visit management by enabling devotees to book darshan slots online. The system reduces overcrowding and long waiting times by providing a digital platform where users can register, log in, and schedule their visit in advance.

The application is built using modern web technologies such as React.js for frontend, Node.js and Express.js for backend, and MongoDB for database management. The system ensures smooth interaction between users and temple administration by maintaining organized digital records of bookings.

This project demonstrates how technology can improve the management of public religious places by providing efficient crowd control and better user experience.

3. Introduction

3.1 Background of the Project

Temples in India attract a large number of devotees every day. Managing such large crowds manually often leads to long waiting times, confusion, and inconvenience for visitors.

Traditional systems rely heavily on physical queues and manual record keeping. This creates difficulties in organizing the flow of visitors and maintaining proper records.

To solve this problem, a digital system like DarshanEase can be implemented to manage temple visits efficiently.

3.2 Problem Statement

- Many temples face issues such as:
- Long waiting lines
- Overcrowding
- Lack of proper scheduling
- Difficulty in managing visitor records
- Inefficient manual systems

These problems reduce the comfort and satisfaction of devotees visiting temples.

3.3 Proposed Solution

The proposed system DarshanEase provides an online platform where devotees can:

- Register and create accounts
- Log in securely
- Select available darshan slots
- Book temple visits online
- Receive confirmation of their bookings

This system reduces waiting time and helps temple authorities manage visitors more effectively.

4. Objectives of the Project

The main objectives of the DarshanEase project are:

- To develop an online temple booking system
- To reduce overcrowding in temples
- To provide a simple and user-friendly interface
- To manage temple visitor records digitally
- To improve the efficiency of temple administration

5. Scope of the Project

The scope of the project includes:

- Online registration of devotees
- Secure login system
- Temple darshan slot booking
- Storage of user data in database
- Management of bookings

Future enhancements may include:

- Online payment system
- QR code based entry
- Mobile application
- Real-time slot availability updates

6. Literature Review

Several systems have been developed to manage online booking and scheduling. Many modern web applications provide digital booking facilities for events, travel, and public services.

Online reservation systems help reduce manual work and improve user convenience. Similar approaches can be applied to temple management systems.

Research shows that web-based management systems improve efficiency, reduce errors, and provide better data organization.

7. System Requirements

7.1 Hardware Requirements

- Computer or Laptop
- Minimum 4GB RAM
- Internet connection

7.2 Software Requirements

- Operating System: Windows / Linux
- Frontend: React.js
- Backend: Node.js
- Framework: Express.js
- Database: MongoDB
- Code Editor: VS Code
- Browser: Chrome / Edge

8. System Architecture

The DarshanEase system follows a three-tier architecture:

1. Presentation Layer (Frontend)

This layer provides the user interface where users interact with the system.

2. Application Layer (Backend)

This layer processes user requests and handles application logic.

3. Database Layer

This layer stores all user and booking data.

Flow:

User → Frontend → Backend → Database → Backend → Frontend → User

9. Modules of the System

9.1 User Registration Module

Allows new users to create accounts by entering details such as name, email, and password.

9.2 Login Module

Allows registered users to log in securely using their credentials.

9.3 Darshan Booking Module

Users can select temple and available time slots for booking.

9.4 Admin Module

Admin manages user records and booking information.

10. Database Design

The system uses MongoDB, a NoSQL database.

Main collections include:

Users Collection

- UserID
- Name
- Email
- Password

Bookings Collection

- BookingID
- UserID
- TempleName
- Date
- TimeSlot

11. ER Diagram (Description)

The Entity Relationship Diagram contains two main entities:

User Entity

- UserID
- Name

- Email
- Password

Booking Entity

- BookingID
- TempleName
- Date
- TimeSlot

Relationship: One user can make multiple bookings.

12. Implementation

The project implementation consists of three main parts:

Frontend Implementation

Developed using React.js to create interactive user interfaces.

Backend Implementation

Implemented using Node.js and Express.js to handle server-side logic.

Database Implementation

MongoDB stores user data and booking details.

13. Testing

Testing ensures that the system functions correctly.

Types of testing performed:

- Unit Testing
- Integration Testing
- System Testing

Testing helps identify bugs and ensures system reliability.

14. Advantages of the System

- Reduces waiting time
- Improves crowd management
- Easy online booking

- Digital record keeping
- User friendly interface

15. Limitations

- Requires internet connection
- Limited to registered users
- Depends on server availability

16. Future Scope

Future improvements may include:

- Online payment integration
- Mobile app version
- QR code entry system
- Multi-temple support
- Notification system

17. Conclusion

DarshanEase provides a modern solution for managing temple visits. The system allows devotees to book darshan slots easily and helps temple authorities manage crowds efficiently.

By using web technologies, the system simplifies temple management and enhances the experience of devotees.
